

Program Change Press-N-Release

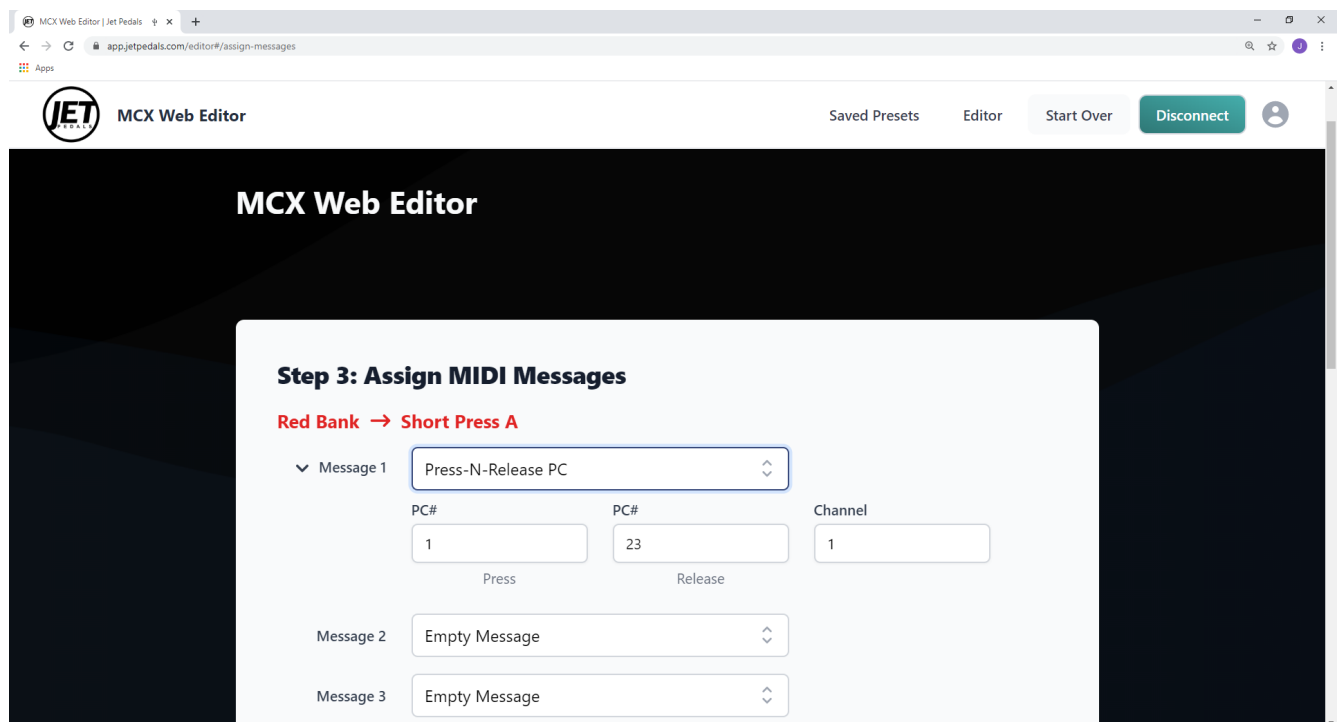

Similar to PC Toggle but operates in a momentary fashion

Enter the PC#'s and Channel for which to send your message.

This feature works in a momentary fashion, when pressing (and holding) the button associated with this Midi type, the PC# above Press will be sent. When releasing the button associated with this Midi type, the PC# above Release will be sent.

This Midi type can be used to temporarily jump to one preset, such as a preset set for large swells, and then quickly return back to your original preset.

* When using this Midi type **and you expect to hold the button down for longer than a half of a second.** *Both the short press and long press of the same button must be assigned to this Midi type and must also use the same values,* if not, the desired result may not be as expected.

The screenshot shows the MCX Web Editor interface in a web browser. The browser's address bar shows the URL `app.jetpedals.com/editor#/assign-messages`. The page header includes the JET PEDALS logo, the text "MCX Web Editor", and navigation buttons: "Saved Presets", "Editor", "Start Over", and "Disconnect".

The main content area is titled "MCX Web Editor" and displays "Step 3: Assign MIDI Messages". Below this, it says "Red Bank → Short Press A".

Under "Message 1", a dropdown menu is set to "Press-N-Release PC". Below this dropdown are three input fields:

PC#	PC#	Channel
1	23	1

Below the input fields, the labels "Press" and "Release" are centered under their respective PC# values.

Under "Message 2" and "Message 3", the dropdown menus are set to "Empty Message".
