

# Strymon Bank Change

Used to bank up or down on a Strymon pedal

This is similar to CC Press-N-Release where one value is sent on the press and another on the release of the button however to bank up or down, Strymon requires two simultaneous CC#'s to be sent when pressed and released.

To bank down, enter CC#80 and Value 0 in the slots above Press. Also enter CC#82 and Value 127 in the slot above Release.

To bank up, enter CC#81 and Value 0 in the slot above Press. Also enter CC#82 and Value 127 in the slot above Release.

\* When using this Midi type ***and you expect to hold the button down for longer than a half of a second***. ***Both the short press and long press of the same button must be assigned to this Midi type and must also use the same values***, if not, the desired result may not be as expected.

The screenshot shows the MCX Web Editor interface. At the top, there's a navigation bar with the JET logo, 'MCX Web Editor', and buttons for 'Saved Presets', 'Editor', 'Start Over', and 'Disconnect'. The main content area is titled 'MCX Web Editor' and displays 'Step 3: Assign MIDI Messages'. Below this, it says 'Red Bank → Short Press A'. There are two message slots: 'Message 1' and 'Message 2'. 'Message 1' is set to 'Strymon Bank Up/Dwn'. Underneath, there are input fields for 'CC#' (80 and 82) and 'Value' (0 and 127) for 'Press' and 'Release' actions respectively. A 'Channel' dropdown is set to '1'. 'Message 2' is set to 'Empty Message'.
