

Can I Control "Insert Pedal Name Here" w/ the Unity6?

Yes, no matter what pedal you have, we can control it!

If your pedal, synth, keyboard, software, etc has a 5-pin, ¼" TRS, or Bluetooth MIDI connection we can control it!

If you have an analog pedal and you need to control the on/off state of the pedal, just place it in one of the Unity6's 6 loops and we can turn it on and off!
