

# Delay (ms)

Used to delay the MIDI stack (any of the 32 messages stored in a preset) for a predefined time.

This can be useful when you experience an external MIDI pedal that needs some time to process several MIDI messages. Inserting a small delay in between several messages will allow some time for that pedal to process each message individually.

Select the Value and the Multiplier (1,000 milliseconds ='s 1 second).

The range for this message type is 1ms to 10 seconds.

The screenshot shows a dark-themed interface for configuring a MIDI preset. At the top left is a back arrow icon. The settings are as follows:

- Message #:** Message 1 (dropdown)
- Midi Channel:** Channel 1 (dropdown)
- Press Action:** Press (dropdown)
- Message Type:** Delay (ms) (dropdown)
- Number:** 10 (with minus and plus buttons and a slider)
- Value 1:** x 1K (dropdown)
- Value 2:** 0 (with minus and plus buttons and a slider)

At the bottom, it says "Hold BPM Dial for 3s to Clear Preset".
