Toggle Loop

Used to toggle on/off any loop 1 thru 6

Select the Loop # to toggle on/off.

When pressing the switch associated with this Midi type, the loop will be turned on with the first press and off on the second press, this process will repeat each time the button is pressed. Switching banks will not lose track of your toggle state and once returning to the previous back the switch will match the state that the loop is currently in (on/off).
