

Using the Set List Feature

The Set List lets you line up banks in song order and scroll only through that list during a gig. You can store up to 45 banks in a set list.

Open the Set List

Long press the center of the Home Screen. The Set List screen has three columns:

- **Click to Add** — banks you can add (paged in ranges: banks 1–42, 43–85, and 86–127)
- **Your set list** — banks already added, in play order
- **Sort / Erase / Commit** — reorder, remove, or activate

Build the list

1. Tap a bank in **Click to Add** to append it to your set list. Bank names show if you've named them; otherwise they appear as Bank 1, Bank 2, etc.
2. To reorder, tap an item in your set list so it's selected, then use **Top**, **Up**, **Down**, or **Bottom**.
3. **Del Item** removes the selected song. **Clr List** clears the whole set list.
4. When the order looks right, tap **Activate** under Commit. That saves the list to the pedal and turns Set List scrolling on.

After Activate, the Home Screen uses the Set List layout and shows previous / next song names. Bank up / bank down now move through your set list only (wrapping from last song back to the first), instead of every bank up to Max Number of Banks.

Turn Set List off

Open the Set List screen again and leave the list empty, then Activate — or cancel out of Set List mode so the pedal returns to normal bank scrolling (Bank 1 loads).

Tips

- Name your banks in Edit Bank Info first so the set list is easy to read on stage.

- Set List is separate from Copy | Paste | Swap and from Jump to Bank / Last Used Bank messages. Those still work; Set List is the dedicated “tonight’s songs” scroller.
 - Max Number of Banks still limits normal scrolling when Set List is off. Jump to Bank can still reach any bank.
-

Note: If **Del Item** leaves an empty slot in the list, clear with **Clr List** and rebuild, or remove extras before **Activate**, so bank scrolling only includes the songs you meant to keep.
